PROFESSIONAL PROFILE

Software developer building payment-platform operations, full-stack web tools, backend APIs and automation. Experienced with transaction verification, workflow design, administrative dashboards and self-hosted services. Earlier IT-support work brings strong troubleshooting and infrastructure skills.

PROFESSIONAL EXPERIENCE

Software Developer | Payment Platform

Current role

- Developed payout and settlement name-check workflows, manual transfer features and downloadable receipts.
- Improved transaction search, validation, audit logs, scheduled jobs and admin/merchant UAT workflows.

IT Support | CISA NGO

Started Oct 2022

- Supported hardware, networks, workstations, printers and fingerprint systems; built an organizational website.

IT Infrastructure / Project Work | MEES & NPIC

Earlier project-based and university work

- Delivered school computer labs, server-client environments, MikroTik routers and wireless-network setups.
- Contributed to 20+ IT projects, including network troubleshooting, hardware setup and staff training.

SELECTED SOFTWARE PROJECTS

VaultHub — Bank-account inventory, permission-aware credentials, Excel import and audit tracking.

Telegram E-Shop — Python bot and admin tools for digital products, KHQR payments and payment-message matching.

WindyCast — In-development Android-to-Windows game streaming with QR pairing and capture workflows.

Telegram Drive — File-management platform built around Telegram storage and web/desktop access.

TECHNICAL STRENGTHS

Full-stack development • REST APIs • Payment workflows • Automation • Linux/self-hosting • Network support
